## A TABULAR CENSUS DATA FILE FOR ETHNIC GROUPS IN

### CANADA: A FEASIBILITY STUDY\*

#### Objective

The objective of the original proposal, submitted to the Department of the Secretary of State in 1976, was to test the feasibility of a plan "to improve the accessibility of census data relevant to ethnic populations in Canada". Published tabulations of the 1971 Census of Canada incorporating demographic, social, and economic characteristics of the population aggregated in terms of ethnic and cultural origins have been quite limited, both in number and detail, and are consistently available for only eight or nine of the fifty or so ethnic origin groups that can be identified in census data files. Most of these groups are the larger and more established ones. The remainder are grouped together in residual categories such as "Other European", "Asian", and "Other origins", and are of little help to those interested in doing research on the smaller minority groups in Canada.

#### Proposed Solution

The Executive of the Canadian Ethnic Studies Association, after considering present data sources and various alternatives recommended what it considered to be the optimum solution for that category of researcher who is interested in carrying out systematic analyses of ethnic data. For purposes of this type of research, the production of carefully designed sets of multivariate tabulations on computer tapes, was thought to offer the greatest degree of flexibility for the analyst. For the general researcher and user of ethnic data who does not want to get involved in the more complicated data processing and analysis procedures, the production of simplified versions of the more complex tabulations

\*special acknowledgment is made to Ab Currie for his assistance in the conduct of this feasibility study and to Madeline Richard for the production of the illustrative tables.

in printed form would appear to be sufficient. To meet the needs of a wide range of researchers interested in Canada's ethnic populations the multivariate tabulations would have to be provided for as many of the major statistical areas as possible. Minimally, this would mean producing summary tapes for provinces and some major subdivision within provinces, e.g., metropolitan and non-metropolitan areas.

The selection of computer tapes as the principal format for presentation of the crosstabulation matrices is crucial for the project's success. Computer tape is the only format which permits easy data manipulation, and some selectivity on the part of the researcher in his choice of variables and flexibility to transform the cross-tabular data file into the most suitable form by using only those variables and combinations of categories most relevant to the researcher's interests. It also provides the basis for developing simplified tables which can be reproduced in printed form and made available to the more general consumer of ethnic data.

Central to the question of this project's feasibility is the determination of the degree of complexity and detail that can be built into the basic multivariate tabulations of population characteristics to be derived through the aggregation of individual data files contained in the 1971 Census records. Specifically, the questions that must be answered are those which will permit the determination of (1) the maximum number of variables that can be incorporated into the tabulations, (2) the amount of original detail from the census schedules that can be preserved in the variable categories, (3) the number and types of statistical areas for which the multivariate tabulations can be provided; and (4), last but not least, the cost.

### Feasibility of the Proposal

Design problems. Discussion with Statistics Canada elicited the following information concerning the limitations of computer tape format for presentation of multivariate tabulations:

(1) No tabulation matrix can exceed 40,000 cells for populations of under one million. For populations of one million or more, the maximum number of cells in the tabulation matrix can not exceed 20,000.

(2) In calculating the size of any tabulation matrix, i.e., the cells in the matrix, each variable has to be counted as having "n+1" categories, the additional category being necessary to provide for the variable total and the means for collapsing and simplifying the matrix when required. Matrix size for a three variable table, with each variable having four categories would be  $= (4+1) \times (4+1) \times (4+1)$  or 125 cells.

(3) The basic cost of a 40,000 cell tabulation matrix for a single specified geographical area such as Canada, or the Province of Ontario, was estimated to vary between \$350 to \$400 by the Data Dissemination Unit of Statistics Canada. Multivariate tabulations including constructed variables requiring manipulation of data rather than simple counting (as would be required in constructing the ethnic intermarriage variable) were provisionally estimated to cost in the neighborhood of \$1,000.00 each. With respect to cost estimates in general, estimation procedures will provide only rough estimates at best. Of the two computer summary tapes contracted for in connection with this feasibility study, the estimated cost in one case was forty per cent below the final cost due to an error in the estimation procedure.

In the other case, the cost of the sample multivariate census summary tape fell within the estimated range. Estimates of cost must, of course, be

considered as tentative only.

Selection of key variables. The selection of variables to be included in the multivariate tabulations was presented in the original proposal. The problem addressed here is whether or not all of these variables can, in fact, be included as originally proposed in view of the limitations mentioned above.

A simple calculation will quickly show that any tabulation incorporating all of the proposed key variables and suggested sub-categories would exceed the maximum permissible matrix size. For example, a crosstabulation of the key variables for one ethnic origin group showing occupation (7), by education (6), by income (8), by sex (3), by age (7), by period of immigration and generation status (8), for all of Canada would produce a crosstabulation matrix with  $(7) \times (6) \times (8) \times (3) \times (7) \times (8)$  or 56,448 cells. And, this does not include any of the special interest variables which would likely be incorporated into the analysis as a dependent variable. Clearly, some compromise has to be made regarding the number of variables and categories. Furthermore, the number of key variables and the extent to which the variable categories would have to be combined would be dependent upon the particular special interest variable incorporated into the analysis, since the number of categories for these variables varies considerably, e.g., the religious variable has fourteen categories while family size has been defined in terms of only four.

Given the above limitations and problems, the following example is given to illustrate the extent to which the original plan would have to be modified in order to produce a useable multivariate tabulation data file. It is also worth noting that a practical solution to the problem precludes the production of single 40,000 cell matrix tapes for each ethnic origin group and special interest variable. Given the 51 separate ethnic origin groups for which data

were collected and coded, and the nineteen special interest variables defined in the proposal, a total of nine hundred and sixty-nine tabulation matrices would be required. Using the estimated cost of \$400.00 per tabulation provided by Statistics Canada would put the total price tag at \$387,600.00 just to produce the tables for the special interest variables for Canada alone. Clearly, to produce the same set of tabulations for each of the provinces, and the combined territories as well as total Canada would require twelve times the number of tables (12 x 969) or 11,628. Even at bargain basement prices the cost would be unmanageable.

In order to provide some basis on which to proceed towards a realistic solution, a trial and error procedure was instigated to examine some of the practical options which might prove to be economically feasible. Since it was obviously unrealistic to proceed along the lines previously suggested, it was decided (somewhat arbitrarily) to include one multivariate crosstabulation for each of five selected ethnic origin groups in each 40,000 cell tabulation matrix. To accomplish this, while retaining as many of the original categories for each variable as possible, would require the elimination of one key variable and the reduction in the number of categories for the immigration and generation variable by just one. Providing the multivariate tabulation for each of five ethnic groups would produce a matrix of the following size:

Ethnic Origin (5) x Education (6) x Income (8) x Sex (3) x Age (7) x

Immigration and Generation Status (7) = 35,280 cells. Clearly, this is not yet an acceptable solution since no provision was made for the inclusion of any of the special interest variables. However, it quickly becomes apparent that any additional modifications will have to be made at the expense of either eliminating additional key variables or reducing their number of categories.

In the latter eventuality, the number of variable categories would have to be reduced by a number equalling the number of categories in the special interest variable to be included in a given crosstabulation. Again, as an example, to produce a set of crosstabulations for five ethnic origin groups incorporating five key variables and religion (13) as the special interest variable, the number of categories for the key variables would have to be reduced as follows, remembering that the total number of actual variable categories is one less than the number shown:

Ethnic Origin (five groups) showing Education (3) x Income (4) x Sex  
(3) x Age (4) x Immigration/Generation Status (4) x Religion (13) =  
37,440 cells.

An examination of the original variable list (included in Appendix A) will quickly reveal the extent to which the categories would have to be reduced with a corresponding reduction in their value for descriptive or analytical research. Education, for this example, would be reduced to just a dichotomous variable. The loss of information would be significant.

In addition, because the number of categories for the special interest variables vary considerably, one would have to decide whether or not the special interest variable with the largest number of categories would set the limit for the key variable categories in all of the tabulations or whether they would be allowed to vary in each case according to the characteristics of each special interest variable. The gain in information achieved in the latter instance would be partially offset by a lack of uniformity with respect to the available key variables for subsequent analyses. However, this would perhaps be a preferable solution compared to the alternative of eliminating one or more additional key variables to permit retention of the original

categories for those variables remaining in the tabulation matrix. To the extent that the number of variables is reduced, or the number of their categories, or both, the value of the multivariate matrix to the researcher is correspondingly reduced.

Using five ethnic origin groups per tabulation matrix with five key variables and one special interest variable (all with reduced numbers of categories) as previously suggested would cost an estimated \$76,000.00 to produce ten sets ( $10 \times 5 = 50$  ethnic origin groups) for each of nineteen special interest variables for just one geographical unit, e.g., Canada. Provision of the same 40,000 cell matrix computer summary tape file for additional (and smaller) geographical areas would tend to increase the overall project cost while at the same time reducing the per unit cost for additional tabulations.

Lack of uniform geographical distribution for the 51 ethnic origin groups might contribute to lower costs than estimated if tabulations for some groups did not have to be produced for those areas where they are not present. Some savings might also be realized if some of the smaller groups were to be combined to preserve sufficient numbers for analysis. The latter option, while statistically sound, tends to reduce the usefulness of the data for the researcher interested in specific ethnic or cultural groups. It would be better to omit those groups which are not present in significant numbers, or present just the marginal distributions for those groups which are present in relatively small numbers so that their distributions for the basic characteristics would not be lost to the researcher.

In the eventuality that decisions would have to be made regarding the exclusion of some groups from the multivariate tabulations for specific areas,

frequency distributions for all of the 51 ethnic origin groups were obtained for provinces and several selected subprovincial regions by generational status and period of immigration of the foreign born. See Table A of the Appendix.

Data tapes and data access. It was the original intention to produce computer tape data files that could be accessed by relatively simple packaged programmes such as SPSS, as is the case for the 1971 Census Public Use Sample tapes. It was discovered, however, that SPSS is designed to work only with individual data files, and not with aggregated data of the type that would be contained in the multivariate tabulation tapes to be produced by Statistics Canada for this project. Statistics Canada has been in the process of developing and modifying its computer packaged programme specifically designed to provide access to its user summary tapes. The revised programme package was expected to be available in the summer of 1978.

In the course of the feasibility study, several tabulations were produced from the Census summary tape obtained from Statistics Canada using PL/1 as the programming language. While it was demonstrated that the researcher does have some flexibility in the selection of variables, combining categories, and tabular arrangement, it was not possible to do so without the services of an experienced computer programmer. However, the availability of Statistics Canada's statistical package programme may resolve this problem.

Printed and microfiche output. The provision of printed output in book form, or on microfiche, was seen as a means of providing data on ethnic groups for those who did not require the greater detail or flexibility provided by the computer summary tapes. Tabular data in either printed or microfiche

format would be simplified crosstabulations of a reduced number of key and special interest variables with generally fewer variable categories that would help fill the present data gap which presently exists for the smaller ethnic and cultural origin groups in Canada.

Pursual of this objective was basically contingent upon determining the feasibility of the census data file project as the summary tapes would be required for the production of any simplified tables either in printed form or on microfiche. Cost of printed output from the summary tapes was estimated at \$2.00 per 1,000 lines, while the cost of producing a set of six three-variable crosstabulations on microfiche from the same summary tape would cost \$90.00 each, or \$540.00 in addition to the cost of intermediate production tapes. It would appear that the production of tabulations on microfiche as a means of achieving wider distribution and use of ethnic origin data is not a particularly attractive alternative to printed output. However, no attempt was made to determine the cost of reproducing printed computer output for wider circulation.

#### Production of a Multivariate Summary Tape

Given the fact that the estimated cost of producing multivariate summary tapes was subject to some error, and that the design and production problems had not been tested in practice, a specific tabulation incorporating five of the key variables and one special interest variable was designed and ordered from Statistics Canada. The tabulation was to be provided in the form of a computer summary tape and also in printed output. In addition, six simplified tabulations were to be derived from the summary tape and produced in microfiche format.

Between the time of the initial development of this proposal and the date of ordering the special tabulation, Statistics Canada succeeded in incorporating the new Blishen occupational status scores in the census master tapes. Because of their availability, the Blishen occupational scores were substituted for the educational variable used in the previous example, and the following multivariate tabulation was ordered from Statistics Canada:

Ethnic Origin (5) x Blishen Occupational Prestige Scores (7) x Sex (3) x Age (7) x Period of Immigration/Generational Status (8) x Language of the Home (4)

Variable specifications:

|                   |            |   |
|-------------------|------------|---|
| 1. Ethnic Origin: | Greek      | 1 |
|                   | Portuguese | 2 |
|                   | Hungarian  | 3 |
|                   | Polish     | 4 |
|                   | Chinese    | 5 |

Note: No Total

2. Occupation: Following categories of the Blishen Scale.

|           |   |
|-----------|---|
| 0 - 29    | 1 |
| 30 - 39   | 2 |
| 40 - 49   | 3 |
| 50 - 59   | 4 |
| 60 - 69   | 5 |
| 70 & over | 6 |
| Total     | 7 |

|         |        |   |
|---------|--------|---|
| 3. Sex: | Male   | 1 |
|         | Female | 2 |
|         | Total  | 3 |

|         |                |   |
|---------|----------------|---|
| 4. Age: | 0 - 14 yrs.    | 1 |
|         | 15 - 24 yrs.   | 2 |
|         | 25 - 34 yrs.   | 3 |
|         | 35 - 44 yrs.   | 4 |
|         | 45 - 64 yrs.   | 5 |
|         | 65 yrs. & over | 6 |
|         | Total          | 7 |

5. Period of Immigration/Generation status:

|                                     |   |
|-------------------------------------|---|
| Native born of Native-born Parents  | 1 |
| Native born of Foreign-born Parents | 2 |
| Foreign Born: Immigrated pre 1931   | 3 |
| Immigrated 1931-1945                | 4 |
| Immigrated 1946-1950                | 5 |
| Immigrated 1951-1960                | 6 |
| Immigrated 1961-1971                | 7 |
| Total                               | 8 |

6. Language of the Home:

|                                    |   |
|------------------------------------|---|
| Speaks ethnic language in the home | 1 |
| Speaks English in the home         | 2 |
| Speaks French in the home          | 3 |
| Total                              | 4 |

In the process of preparing this tabulation, Statistics Canada suggested several modifications in order to eliminate irrelevant parts of the initially proposed tabulation and to resolve some technical problems. Sex was eliminated as a variable and the tabulation was provided for males only; and the age group, 0-14 was removed since the Blishen scores (as with most economic and labour force characteristics) are relevant only for those 15 years of age and older). The tabulation was to be placed on the summary tape and the printed output in two parts, i.e., the first part included only those males with Blishen occupational prestige scores of less than fifty, and the second part included those with prestige scores of fifty or greater. (The latter modification creates problems for the programmer who attempts to produce tables from the summary tape when the Blishen scores are used as one of the principal variables in a crosstabulation rather than as one of the control variables). Note in the sample table produced from the summary tape, that the table was also produced in two parts to illustrate simplest methods of presenting the data from two data files. It is possible to combine the data files however, but requires considerable programming expertise.

These modifications are good examples of the kinds of problems that are encountered when attempting to develop a set of standard core variables and special interest variables. Not all of the categories of some variables will be relevant, such as was the case with respect to sex and age in relation to Bligh occupational prestige scores. Nevertheless, for other special interest variables, such as educational attainment, the full range of age and sex categories might be required. If both occupational prestige scores and educational attainment were to appear as key variables in a particular tabulation involving age and sex, there would automatically be a number of zero cells in the crosstabulation matrix. There is really no way of avoiding this type of problem without eliminating some of the information which some researchers might find useful with respect to their particular interests.

The matrix size for the tabulation originally ordered was 23,520 cells, but this was reduced to a considerably smaller number as a result of the several modifications. The final matrix size was just 6,720 cells. The cost for this particular summary tape (\$350) is probably below the overall average because of the reduction in size caused by the special modifications. However, while the modifications made sense with respect to this particular tabulation request involving the occupational variable, they reduced the general usefulness of the summary tape for anyone wishing to examine language patterns (in the home) for all age and sex groups for these five ethnic origin groups. It would seem that either the tabulations must include the full range of variable categories for all variables, or that parallel sets of tabulations for specially defined populations would have to be produced, e.g., for the labour force population, the school-age population, etc. The limitations of this particular tabulation would also suggest that if the number of key variables has to be restricted,

that perhaps education would be a better variable than occupational prestige scores which have somewhat limited applicability.

The order for the six tabulations to be derived from the summary tape and produced in microfiche format was cancelled because the estimated cost of production exceeded our budget capabilities. If the tabulations for ethnic origin groups were to be provided in printed form for distribution, the feasibility of microfiche should be examined again at that time as the tables would then be available in the appropriate form for reproduction. Present indications are, however, that microfiche format would be expensive.

#### Accessing the Multivariate Summary Tape.

For reasons previously mentioned, the PL/1 programming language was used to produce several variants of tabular data from the summary tape to demonstrate its accessibility and flexibility. The Polish ethnic origin group was selected and Blishen scores were crosstabulated with generation and period of immigration of the foreign born using the age and language variables as controls. In the second case, Blishen scores were crosstabulated with the language variable using the remaining variables as controls. Both tables were relatively inexpensive to produce, each costing approximately \$6.00. However, without the Statistics Canada programming package, a fairly skilled programmer is needed to produce these types of tables from the computer summary tape.

#### Summary and Conclusions

There is little question as to the importance or the need for developing a tabular data file for Canada's ethnic and cultural origin groups. The lack of published data especially for the more recent minority immigrant ethnic origin groups, is a severe obstacle in the path of adequate research. It is inconceivable that the government of this country should pursue its multicultural

policies without adequate knowledge of its diverse cultural groups or effects of its policies on the ethnic and cultural character of its population.

The list of variables and variable categories presented in the initial proposal for the feasibility study are still considered to be the minimal basic set for a project of this kind. To reduce either the number of variables, or the number of their categories, would seriously impair the value and usefulness of a tabular data file of the type proposed. It is particularly important that as many of the original variable categories be retained as possible in order to preserve the flexibility to meet diverse and unanticipated research needs. Any major reduction in either the number of variables or categories would essentially destroy the value of the data file.

The usefulness of the proposed data file would also depend upon the number of areas for which the tabulations would be made available. The uneven distribution of ethnic and cultural groups across Canada makes it almost mandatory to provide the tabulations for provinces and their major sub-areas, however defined. A tabulation file for Canada's fifty or so ethnic and cultural origin groups, limited to total Canada only, while valuable for comparative ethnic research at the national level would preclude the investigation and determination of the significance of regional differences.

Given these general considerations, plus the cost of the sample multi-variate summary tape produced for this feasibility study, it becomes quite clear that the project as originally planned is not economically feasible. Redesigning the tabular data file to bring the cost in line would require unacceptable changes in the number of variables and their subcategories.

### A Possible Alternative Strategy

The second option presently available to the researcher, mentioned on page two of the proposal, i.e., the commissioning of special census tabulations designed for the purpose specified by the researcher, is perhaps still the optimal solution for those planning systematic analyses of the data on ethnic and cultural origin groups collected during the national census. It is worth noting that the value of these special unpublished tabulations on ethnic populations would be cumulative in the long run if it were easier to obtain information on the kinds of special tabulations that have been produced. It's not unlikely that special tabulations already produced might meet the researcher's needs sufficiently to eliminate the need for additional tabulation requests. This information should be more widely distributed, especially to the research centres in Canada's universities.

The alternative strategy to be suggested here is somewhat similar to the proposed printed volume of less complex multivariate tabulations that was envisioned as part of the original project. Since that proposal was contingent upon the feasibility of the production of the multivariate computer summary tapes which now appear to be prohibitively expensive, perhaps some thought should be given to ways of generating less detailed and less expensive data tables for ethnic and cultural origin groups. As matters presently stand, there simply aren't any published data for the majority of such groups in Canada.

It would appear to be quite feasible to obtain basic data for the smaller ethnic and cultural groups by developing the specifications for a set of tabulations that would supplement those already published for the major groups by Statistics Canada in its 1971 Census publications. Specifically, they have already published fairly extensive tabulations providing a considerable amount

of social and economic data for the major groups for Canada and its provinces and census metropolitan areas. The groups for which data have been published are the British Isles, French, German, Italian, Jewish, Netherlands, Polish, and Ukrainian origins. The remaining forty-two or so ethnic origin groups either appear in combinations of two or more, as is the case for the Scandinavians, Indians and Eskimos, Chinese and Japanese, and Asians, or are just lumped together in residual categories such as "Other Europeans", "Other Asians", or just "Other". Thus, while data have been collected and stored on magnetic computer tapes for 51 separate ethnic origin categories, census information has only been made available for just eight separately identified groups, several combined groups, and nothing for the many remaining individual groups.

The published data on the eight major ethnic origin groups are not very extensive, nevertheless, the usefulness of these data could be expanded considerably if similar tabulations could be provided for the remaining, but separately identified ethnic origin groups for the same geographical areas. The cost factor should be reduced considerably from that of the initial proposal by the fact that the numbers involved would be relatively small as would be the tabulation matrices. Note that the combined population for these groups is only a little over one and a half million.

|                    |                |
|--------------------|----------------|
| Scandinavian       | 384,795        |
| Other European     | 772,480        |
| Asian              | 285,540        |
| Indian and Eskimos | 312,765        |
| Other and Unknown  | <u>293,580</u> |
| Total              | 1,664,365      |

The advantages of this approach are two-fold. Not only would it produce basic demographic data for the individual ethnic groups which are not presently available, but it would produce it in a form which is directly comparable to

existing data which have been published for the major groups in the 1971 Census publications and already given widespread distribution. While this would obviously not overcome the rather severe limitations on the amount of social and economic data presently available for Canada's ethnic populations, it would provide basic data not presently available and provide the opportunity for comparative analyses of the basic characteristics for almost all of the ethnic groups presently in Canada.

In the first two volumes of the 1971 Census of Canada, there are approximately forty tables which present the basic demographic data for the major ethnic groupings of the population for Canada, its rural and urban areas, provinces, and census metropolitan areas. In the volumes dealing with economic characteristics there are only two tables giving industry characteristics for ethnic origin groups and two tables for occupational characteristics. The total number of tables is relatively small, and the supplementary tables could be produced in the same sequence as they appear in the census publications either in their entirety if sufficient funds were made available, or in parts as funds become available. Given the absolute absence of census data for most of the individual minority groups, the publication of even a single table would make a significant addition to our knowledge of the minority ethnic groups in Canada.

The objective of such an alternative proposal would be to publish supplementary tables for the minority ethnic groups in a format similar to that used in the 1971 Census at a price sufficient to cover the cost of printing and distribution. No attempt has been made to obtain estimates of the cost of producing such supplementary tables by Statistics Canada, but the average matrix size is considerably smaller than the average size of the tabulation matrices in the initial proposal, and the population N's are less than ten per cent of

those involved in the initial proposal. Even if the average estimated cost per table was as high as before, i.e., \$400.00 the total cost of developing the supplemental tables would be in the neighborhood of \$17,000. While the value of such supplementary tables may fall considerably short of the potential value of the previously proposed multivariate tabulation computer tapes, supplementary tables for the minority ethnic groups would meet a very great need for researchers interested in Canada's minority ethnic origin groups while simultaneously enhancing the value of data already published on Canada's major ethnic and cultural populations.

## APPENDICES

- A. List of variables for the proposed data file for ethnic groups.
- B. Request of August 19, 1977, for special tabulation to Statistics Canada including variable specifications and letter of confirmation of November 27, 1977, regarding modifications requested by the Data Dissemination Unit of Statistics Canada.

Special tabulation census summary tape printed output for selected characteristics for five ethnic origin groups, Canada, 1971.

Special tabulation census summary tape printed output showing rural-urban distributions by major geographical areas for detailed ethnic origin groups by generation and period of immigration of the foreign born, Canada, 1971.

APPENDIX \*

THE VARIABLES AND THEIR CATEGORIES

It should be emphasized that the categories indicated under each variable are tentative. The categories will be established definitely only after the appropriate tests have been done during the preparatory phase. The first principle to be followed is to use as many categories as the census questions and coding allows. The second is to collapse categories in order to avoid too many empty cells or too many cells rounded at 5. The decision rule to be followed in this regard still have to be worked out.

1. Ethnicity

- as many categories as possible
- collapsing of categories only when necessary and depending on the size of the groups in the units under consideration (i.e. province, city.etc.)

2. Age

- 0-14
- 15-24
- 25-34
- 35-44
- 45-64
- 65+

3. Occupation

Blishen scale (six categories)

Mr. Alex Berljawsky,  
Census Field, Statistics Canada,  
Ottawa, Ontario.

Dear Mr. Berljawsky,

In connection with the Tabular Census Data File Project being sponsored by the Canadian Ethnic Studies Association, I wish to order from Statistics Canada: A) a tabulation on summary tape and B) six tabulations on microfiche.

A) The tabulation on summary tape requested, and the variable specifications are as follows. The areal unit is Canada.

Tabulation:

Ethnic Origin BY Occupation BY Sex BY Age BY Period of Immigration/Generation BY Language of the Home

Variable Specifications:

1) Ethnic Origin:

|            |   |
|------------|---|
| Greek      | 1 |
| Portuguese | 2 |
| Hungarian  | 3 |
| Polish     | 4 |
| Chinese    | 5 |

Note: No Total

2) Occupation: The following categories of the Blishen Scale.

|             |   |
|-------------|---|
| 0 - 29      | 1 |
| 30 - 39     | 2 |
| 40 - 49     | 3 |
| 50 - 59     | 4 |
| 60 - 69     | 5 |
| 70 and over | 6 |
| Total       | 7 |

3) Sex:

|        |   |
|--------|---|
| Male   | 1 |
| Female | 2 |
| Total  | 3 |

4) Age:

|                   |   |
|-------------------|---|
| 0 - 14 years      | 1 |
| 15 - 24 years     | 2 |
| 25 - 34 years     | 3 |
| 35 - 44 years     | 4 |
| 45 - 64 years     | 5 |
| 65 years and over | 6 |
| Total             | 7 |

.....2

# 5) Period of Immigration/Generation:

|                                      |   |
|--------------------------------------|---|
| Native Born of Native Born Parents   | 1 |
| Native Born of Foreign Born Parents  | 2 |
| Foreign Born: Immigrated Pre 1931    | 3 |
| Foreign Born: Immigrated 1931 - 1945 | 4 |
| Foreign Born: Immigrated 1946 - 1950 | 5 |
| Foreign Born: Immigrated 1951 - 1960 | 6 |
| Foreign Born: Immigrated 1961 - 1971 | 7 |
| Total                                | 8 |

# 6) Language of the Home:

|                                |   |
|--------------------------------|---|
| Speaks Ethnic Language in Home | 1 |
| Speaks English in Home         | 2 |
| Speaks French in Home          | 3 |
| Total                          | 4 |

B) Below is a list of six tabulations which are required on microfiche. a) The variable specifications and b) the areal unit are the same as for the summary tape. c) The fiche should be appropriate for a lens reduction ratio of 48X. d) We require positive fiche.

- 1) Ethnic Origin BY Occupation BY Period of Immigration/Generation
- 2) Ethnic Origin BY Age BY Period of Immigration/Generation
- 3) Ethnic Origin BY Sex BY Occupation
- 4) Ethnic Origin BY Age BY Language of the Home
- 5) Ethnic Origin BY Period of Immigration/Generation BY Language  
of the Home
- 6) Ethnic Origin BY Occupation BY Language of the Home

As was suggested in our last telephone conversation, I will contact you within two weeks in order to get a preliminary cost estimate and to discuss any matters you might wish to raise. The cost of the microfiche production process, in its various phases, is of particular interest. The use of microfiche as a format for storing the data file is still under consideration, and such information is important for making a decision about its use.

If questions arise requiring an immediate response, and you are unable to reach me by telephone, you should contact Professor Warren E. Kalbach at Erindale College, University of Toronto, (416) 828-5315.

.....3

The contract for the summary tape and the microfiche should be sent to the Canadian Ethnic Studies Association at the following address.

Mr. Norbert Hartmann,  
Canadian Ethnic Studies Association,  
43 Reaburn Avenue,  
Downsview, Ontario.

Yours truly,

Albert W. Currie  
Research Assistant  
Canadian Ethnic Studies Association

FICHER DE DONNÉES DU RECENSEMENT RELATIVES AUX COMMUNAUTÉS  
ETHNIQUES DU CANADA  
ETUDE DE FAISABILITÉ\*

Objectif

Dans le projet initial soumis au Secrétariat d'Etat en 1976, on se proposait d'étudier les conditions de mise en oeuvre d'un système susceptible de faciliter l'accès aux données du recensement relatives aux populations ethniques du Canada. Les totalisations publiées à la suite du recensement réalisé au Canada en 1971 ne comportaient que fort peu de données démographiques, sociales et économiques rangées selon les caractéristiques ethniques et culturelles de la population; ces données n'étaient disponibles que pour huit ou neuf communautés ethniques sur la cinquantaine que les fichiers du recensement permettaient de distinguer. La plupart des groupes mentionnés étaient les plus importants et les mieux connus. Les autres communautés étaient regroupées en catégories secondaires comme "Européens divers", "Asiatiques", et "origines diverses", ce qui présentait peu d'intérêt pour les chercheurs s'intéressant aux groupes minoritaires canadiens.

\*Nous tenons à exprimer notre vive reconnaissance à Ab Currie pour la contribution qu'il a apportée à cette étude, ainsi qu'à Madeleine Richard pour la part qu'elle a prise à la réalisation des tableaux qui en illustrent le texte.

### Solution proposée

Après étude des sources de renseignements existantes et de diverses autres possibilités, le comité directeur de la Société canadienne d'études ethniques a recommandé ce qu'il considérerait comme la meilleure solution pour les chercheurs désirant entreprendre une analyse systématique des données portant sur les communautés ethniques. On a estimé que pour ce type de recherche, la réalisation minutieuse d'une série de totalisations à variables multiples mise sur bandes d'ordinateur constituait le système le plus pratique pour les chercheurs. Quant aux généralistes et aux utilisateurs de données ethniques ne souhaitant pas recourir à des méthodes de traitement et d'analyse des données très complexes, l'impression sur papier de versions simplifiées des tableaux pourrait être une solution satisfaisante. Comme par ailleurs, des totalisations à variables multiples sur le plus grand nombre possible des principaux domaines statistiques seraient nécessaires pour répondre aux besoins des nombreux chercheurs qui étudient les populations ethniques canadiennes, il faudrait qu'à tout le moins l'on réalise des bandes récapitulatives de données propres à chaque province et quelques-unes portant sur les principales subdivisions provinciales (les zones métropolitaines ou non, par exemple).

Pour garantir le succès du projet, il est indispensable de recourir aux bandes d'ordinateur comme principale forme de présentation des matrices de totalisations recoupées. Cette présentation est la seule qui permette une manipulation facile des données; de plus, les chercheurs peuvent ne retenir du fichier de totalisations recoupées que les variables et les combinaisons qui leur conviennent le mieux. Les bandes informatiques permettent en outre de réaliser des tableaux simplifiés qui peuvent être imprimés sur papier et mis à la disposition de l'ensemble des utilisateurs de données ethniques.

Pour juger de la faisabilité du projet, il faudrait au préalable, et c'est là un élément essentiel, déterminer le degré de complexité et de précision que l'on pourrait atteindre dans la réalisation des totalisations à variables multiples relatives aux données démographiques à partir d'une compilation des données de différents fichiers constitués dans le cadre du recensement de 1971. En l'occurrence, il s'agirait notamment de connaître: (1) la quantité maximale de variables susceptibles d'être introduites dans les totalisations; (2) le nombre d'éléments bruts des tableaux du recensement que l'on pourrait conserver dans les diverses catégories; (3)

le nombre et les genres de domaines statistiques pour lesquels on pourrait disposer de totalisations à variables multiples et (4) le coût total de l'entreprise, facteur qu'on ne saurait évidemment ignorer.

#### Étude des modalités pratiques

Difficultés de conception. Il ressort de discussions avec Statistique Canada que les contraintes suivantes doivent être prises en considération lorsqu'on envisage de recourir aux bandes d'ordinateur pour présenter des totalisations à variables multiples:

(1) Pour les communautés de moins d'un million de personnes, la matrice de population ne peut comporter plus de 40 000 cellules. Dans le cas d'une population plus importante, 20 000 est le nombre maximum de cellules acceptable.

(2) Pour calculer la taille d'une matrice de totalisation, c'est-à-dire le nombre de cellules de cette matrice, on considère que chaque variable comporte "n + 1" catégories; la catégorie supplémentaire permet de varier le total et de réduire ou de simplifier au besoin la matrice. Dans le cas d'une totalisation à trois variables où chaque variable possède quatre catégories, la taille de la matrice se calcule de la manière suivante:

$(4 + 1) \times (4 + 1) \times (4 + 1)$ , soit 125 cellules.

(3) La section de Diffusion des données de Statistique Canada estime que le prix plancher approximatif d'une matrice de totalisation à 40 000 cellules couvrant une seule zone géographique (le Canada ou la province de l'Ontario, par exemple) se situerait entre 350 et 400 dollars. Les totalisations à variables multiples comportant des variables construites exigeant une manipulation des données et non plus un simple calcul (l'établissement d'une variable sur les mariages interethniques par exemple) sont estimées provisoirement à environ \$1 000 l'unité. L'estimation des coûts globaux ne donne, au mieux, que des chiffres très grossiers. Le coût approximatif de l'une des deux bandes d'ordinateur récapitulatives qui avait été réalisées en liaison avec l'étude de faisabilité, était inférieur de 40 % au coût final à cause d'une démarche erronée dans l'estimation.

Le coût final de l'autre bande récapitulative des données à multiples variables était proche du coût estimatif. On ne doit donc considérer les estimations de dépenses que comme indicatives.

Choix des variables-clés. Le choix des variables pour ce qui est des totalisations à variables multiples a déjà été exposé dans le projet initial. Compte tenu

des contraintes que nous venons d'évoquer, il s'agirait donc maintenant de savoir si l'on peut véritablement utiliser toutes ces variables sous leur forme originale.

Un calcul rapide montre qu'une totalisation qui intégrerait toutes les variables et les sous-catégories proposées excèderait les dimensions maximales acceptables d'une matrice. C'est ainsi qu'une totalisation par recoupements des variables-clés qui tiendrait compte pour une communauté ethnique, de la profession (7) du niveau d'instruction (6), du revenu (8), du sexe (3), de l'âge (7), de la période d'immigration et de la génération (8), et ce, pour l'ensemble du Canada, aboutirait à une matrice de totalisation à 56 448 cellules:  $(7) \times (6) \times (8) \times (3) \times (7) \times (8)$ . Encore faudrait-il ajouter qu'il n'a pas été tenu compte des variables particulières qui seraient vraisemblablement intégrées dans l'analyse au titre de variables dépendantes. Il est donc indispensable de limiter le nombre des variables et des catégories. De plus, le nombre des variables-clés et les combinaisons possibles de catégories devra être établi en fonction du nombre de variables d'intérêt particulier intégrées à l'analyse; en effet, le nombre de catégories que comportent ces dernières fluctue énormément; c'est ainsi que la variable religieuse

comprend 14 catégories tandis que celle sur la famille n'en comprend que quatre.

Compte tenu des limites et des difficultés précitées, l'exemple qui va suivre montre dans quelle mesure il faudra modifier le projet initial en vue de réaliser un fichier pratique de totalisation à variables multiples. On remarquera qu'une solution aux problèmes signalés exclut la réalisation de bandes comprenant une matrice unique à 40 000 cellules pour chaque communauté ethnique et pour la variable d'intérêt particulier. Sachant qu'il existe 51 communautés ethniques différentes originales pour lesquelles on dispose de renseignements codifiés, et 19 variables d'intérêt particulier d'après la proposition, il faudrait un total de 969 matrices de totalisation. Si l'on retient le coût estimatif fourni par Statistique Canada de \$400 par totalisation, le prix total serait de \$387 600 pour la réalisation des totalisations des variables d'intérêt particulier, et ce, pour le Canada seulement. Il faudrait 12 fois plus de tableaux, soit 11 628 (12 x 969) pour réaliser la même série de totalisations sur chacune des provinces, des totalisations regroupant les données provinciales, ainsi que des totalisations pour l'ensemble du Canada. Quant bien même le prix de base serait réduit, les coûts seraient excessifs.

Pour dégager les éléments d'une solution réaliste, on a alors recouru à une méthode d'expérimentation permettant d'étudier quelques possibilités susceptibles d'être plus rentables. D'emblée, il fallait évidemment écarter les précédentes suggestions; on décida donc (assez arbitrairement) de ne retenir qu'une totalisation à double entrée et à variables multiples pour chaque série de cinq groupes ethniques de chacune des matrices de totalisation à 40 000 cellules. A cet effet, tout en conservant le plus grand nombre possible de catégories particulières pour chaque variable, il a fallu supprimer une variable-clé et n'éliminer qu'une des catégories de la variable d'immigration et de génération. La totalisation à variables multiples pour chacune des cinq catégories ethniques aboutirait alors à une matrice dont les dimensions seraient les suivantes:

Origine ethnique (5) x niveau d'instruction (6) x  
revenu (8) x sexe (3) x âge (7) x statut d'immi-  
gration et de génération (7) soit 35 280 cellules.

On constate que cette solution n'est pas encore acceptable car on n'a tenu compte d'aucune des variables d'intérêt particulier. Mais bien vite il est apparu que toute modification supplémentaire entraînerait la suppression de variables-clés supplémentaires ou la diminution du

nombre des catégories. En effet, le nombre des catégories variables supprimées serait équivalent au nombre des catégories de la variable à intérêt particulier que comprendrait une totalisation par recoupements. A titre d'exemple à nouveau, pour réaliser une série de totalisations à double entrée portant sur cinq groupes ethniques particuliers et qui comprendrait cinq variables principales et une variable d'intérêt particulier sur la religion (13), le nombre de catégories des variables-clés doit, sachant que le nombre total des catégories effectives de variables est inférieur d'une unité au nombre indiqué, être réduit de la manière suivante:

Origine ethnique (cinq groupes) indiquant le niveau d'instruction (3) x le revenu (4) x le sexe (3) x l'âge (4) x le statut d'immigration et de génération (4) x la religion (13), soit 37 440 cellules.

Un examen rapide de la liste originale des variables (jointe à l'annexe A) montre à quel point il faudrait réduire les catégories et la perte d'intérêt qui en résulterait pour la recherche descriptive ou analytique. La variable sur l'éducation ne comporterait plus que deux éléments et la perte d'information serait considérable.

En outre, le nombre des catégories des variables d'intérêt particulier fluctuant considérablement, il faudrait décider si la variable d'intérêt particulier comportant le plus grand nombre de catégories constituerait la norme maximale des principales catégories des variables-clés de toutes les totalisations ou si les catégories des variables-clés pourraient varier d'un cas à l'autre en fonction des caractéristiques de chaque variable d'intérêt particulier. Le gain en termes de quantité d'information qui résulterait du choix de la seconde solution serait en partie annulé par un manque d'uniformité des variables essentielles disponibles pour les études ultérieures. Cette solution paraît cependant préférable à l'élimination d'une ou de plusieurs variables essentielles supplémentaires aux fins de maintien des catégories originales des variables conservées dans la matrice de totalisation.

- 7 -

Si l'on réduit le nombre des variables ou le nombre des catégories, voire les deux, l'intérêt de la matrice pour le chercheur sera diminué d'autant.

Comme on l'a déjà vu, il en coûterait environ \$76 000 pour utiliser un système qui, réunissant cinq groupes ethniques originaux par matrice de totalisation, cette dernière comportant cinq variables-clés et une

variable d'intérêt particulier (toutes avec un nombre limité de catégories), pourrait générer dix séries ( $10 \times 5 = 50$  groupes ethniques originaux) pour chacune des dix-neuf variables à intérêt particulier pour une seule zone géographique (le Canada, par exemple). La réalisation d'un fichier sur bande d'ordinateur récapitulative d'une matrice identique à 40 000 cellules portant sur des zones géographiques supplémentaires (et moins étendues) accroîtrait le coût global du projet quoique en réduisant le prix unitaire des totalisations supplémentaires.

Le recours à une répartition géographique non uniforme des 51 catégories ethniques originales pourrait contribuer à réduire le devis général puisqu'il ne serait plus alors nécessaire de produire des totalisations pour des groupes donnés absents de certaines régions. On pourrait peut-être réaliser d'autres économies s'il était possible de regrouper les petites catégories afin de disposer de chiffres suffisants pour l'analyse. Cette dernière solution, tout en étant statistiquement valable, tend à réduire l'utilité des renseignements sur des groupes ethniques ou culturels spécifiques qui intéressent certains chercheurs. A notre avis, il serait préférable d'omettre les groupes dont l'importance

numérique est négligeable ou du moins ne réaliser que des distributions sommaires à leur égard si l'on décide en fin de compte de mettre les principales caractéristiques de leurs distributions à la disposition des chercheurs.

S'il fallait supprimer certains groupes de totalisations à variables multiples de certaines régions, on disposerait des fréquences de répartition des 51 groupes ethniques originaux par province et à l'intérieur de ces provinces, d'après le statut de génération et la période d'immigration (voir le tableau A en annexe).

Bandes magnétiques et accès à l'information. Au départ, il était prévu de réaliser des fichiers enregistrés sur bandes d'ordinateur auxquels on aurait accès à l'aide de programmes relativement simples comme le SPSS (programme statistique à l'usage des sciences sociales) auquel on a eu recours dans le cas des bandes-échantillons à grande diffusion du recensement de 1971. On a cependant constaté que le SPSS n'est conçu que pour les fichiers de renseignements séparés et non pour des renseignements regroupés tels que ceux que contiendraient les bandes de totalisations à variables multiples que Statistique Canada enregistrerait aux fins du présent projet. Ce service améliore et produit actuellement son programme informatique conçu spécialement

pour permettre l'accès aux bandes récapitulatives à ses utilisateurs. Le programme modifié devait être prêt au cours de l'été 1978.

La bande récapitulative du recensement de Statistique Canada qui utilise comme langage de programmation le PL/1 a permis, au cours de l'étude de faisabilité, la réalisation de plusieurs totalisations. Bien qu'on ait montré à cette occasion, que les chercheurs pouvaient ainsi disposer d'une certaine latitude dans le choix des variables, des combinaisons de catégories et de l'organisation des tableaux, on a pu également noter combien l'aide d'un programmeur informatique expérimenté leur serait nécessaire. Le recours au programme de Statistique Canada pourrait cependant permettre de résoudre ce problème.

Listes imprimées et microfiches. La réalisation d'un recueil ou de microfiches à partir des listes imprimées, paraît un moyen de fournir des informations sur les groupes ethniques à ceux qui ne requièrent pas la précision ou la souplesse des bandes récapitulatives d'ordinateur. Sous forme de listes imprimées ou de microfiches, les tableaux de données constitueraient des totalisations à double entrée d'un certain nombre de variables essentielles et de variables d'intérêt

particulier; ils comprendraient en outre quelques catégories variables qui contribueraient à combler le manque d'informations sur les petites communautés ethniques et culturelles canadiennes dont on souffre actuellement.

Dans ces conditions, il s'avérait que la probabilité d'atteindre cet objectif était essentiellement liée à la faisabilité du fichier du recensement, puisque les bandes récapitulatives étaient indispensables à la réalisation de tout tableau simplifié sous forme de liste imprimée ou de microfiche. On a estimé à \$2 par millier de lignes le prix des listes imprimées réalisées à partir des bandes récapitulatives; le coût de la mise sur microfiches d'une série de six totalisations à double entrée et à trois variables extraites des mêmes bandes récapitulatives s'élèverait à \$90 par série; il faudrait donc ajouter \$540 au coût des bandes intermédiaires. Il semble que la mise sur microfiches de totalisations pour permettre une diffusion et une utilisation plus vastes des données ethniques ne constitue pas un substitut satisfaisant aux listes imprimées. On n'a cependant pas cherché à savoir combien il en coûterait de reproduire les listes informatiques imprimées aux fins d'une large diffusion.

### Bandes récapitulatives à variables multiples

L'estimation du coût des bandes récapitulatives à variables multiples était sujette à certaines erreurs; de plus, les problèmes de conception et de réalisation n'ont pas été expérimentés. On a donc conçu une totalisation particulière comprenant cinq variables-clés et une variable d'intérêt particulier; Statistique Canada a été chargé de sa réalisation. Elle devait sortir sous forme de bande récapitulative d'ordinateur et d'une liste imprimée. En outre, six totalisations simplifiées ont été réalisées à partir de la bande récapitulative et mises sur microfiches.

- 10 -

Dans le laps de temps qui a séparé la mise au point initiale du projet et la date de commande de cette totalisation, Statistique Canada a pu inscrire sur les bandes principales de recensement les nouveaux scores Blishen relatifs à l'activité professionnelle. Ces données remplacent la variable relative aux études dont on s'est servi dans l'exemple précédent; on a commandé à Statistique Canada la totalisation à variables multiples suivante:

Origine ethnique (5) x scores Blishen relatifs à l'activité professionnelle (7) x sexe (3) x l'âge (7) x date d'immigration/statut relatif à la génération (8) x langue utilisée au foyer (4)

## Critères variables:

|                      |            |   |
|----------------------|------------|---|
| 1. Origine ethnique: | grecque    | 1 |
|                      | portugaise | 2 |
|                      | hongroise  | 3 |
|                      | polonaise  | 4 |
|                      | chinoise   | 5 |

Remarque: Aucun total

2. Profession: Catégories conformes à celles de  
l'échelle Blighen.

|            |   |
|------------|---|
| 0 à 29     | 1 |
| 30 à 39    | 2 |
| 40 à 49    | 3 |
| 50 à 59    | 4 |
| 60 à 69    | 5 |
| 70 et plus | 6 |
| Total      | 7 |

|          |          |   |
|----------|----------|---|
| 3. Sexe: | masculin | 1 |
|          | féminin  | 2 |
|          | Total    | 3 |

|         |                |   |
|---------|----------------|---|
| 4. Âge: | 0 à 14 ans     | 1 |
|         | 15 à 24 ans    | 2 |
|         | 25 à 34 ans    | 3 |
|         | 35 à 44 ans    | 4 |
|         | 45 à 64 ans    | 5 |
|         | 65 ans et plus | 6 |
|         | Total          | 7 |

5. Date d'immigration/statut relatif à la génération:

|  |   |
|--|---|
| Né au Canada de parents nés au Canada    | 1 |
| Né au Canada de parents nés à l'étranger | 2 |
| Né à l'étranger: immigré avant 1931      | 3 |
| immigré entre 1931 et 1945               | 4 |
| immigré entre 1946 et 1950               | 5 |
| immigré entre 1951 et 1960               | 6 |
| immigré entre 1961 et 1971               | 7 |
| Total                                    | 8 |

6. Langue parlée au foyer:

|                   |   |
|-------------------|---|
| langue ancestrale | 1 |
| anglais           | 2 |
| français          | 3 |
| Total             | 4 |

En préparant cette totalisation, Statistique Canada a proposé plusieurs modifications permettant de supprimer les éléments inutiles de la proposition initiale de totalisation et de résoudre certaines difficultés techniques. On a supprimé la variable relative au sexe; la totalisation ne portait plus que sur les hommes; on a également supprimé la catégorie d'âge de 0 à 14 ans car les scores Blishen (comme la plupart des données sur l'économie et la main-d'oeuvre) ne portent que sur les gens ayant plus de 15 ans. La totalisation devait être enregistrée sur la bande récapitulative et inscrite sur la liste imprimée en deux parties: la première comprenant seulement les hommes de moins de 50 ans ayant des scores d'après l'échelle Blishen relative à la profession, la seconde portant sur les hommes de plus de 50 ans ayant des points. (La suppression de la catégorie d'âge de 0 à 14 ans pose des problèmes au programmeur qui essaye de réaliser des tableaux à partir de la bande récapitulative lorsque les points Blishen constituent l'une des principales variables de la totalisation à double entrée au lieu de l'une des variables de contrôle.) On remarquera que l'échantillon de tableau réalisé également en deux parties à partir de la bande récapitulative, montre les plus simples méthodes de présentation

des données extraites de deux bandes. Il est certes possible de combiner les données de deux sources, mais cela requiert de grandes compétences en matière de programmation.

12 -

Ces modifications traduisent bien les difficultés que l'on rencontre lors de la mise au point d'une série de variables principales normalisées et de variables à intérêt particulier. On n'a pas toujours besoin de toutes les catégories de certaines variables: c'est le cas de la variable relative au sexe et à l'âge lorsque l'on utilise l'échelle Blishen relative à l'activité professionnelle; dans le cas d'autres variables d'intérêt particulier cependant, le niveau d'instruction, par exemple, la totalité des catégories d'âge et de sexe peuvent être nécessaires. Si les échelles d'activité professionnelle et le niveau d'instruction doivent constituer des variables-clés dans une totalisation qui incluerait également l'âge et le sexe, la matrice de totalisation recoupée comprendrait plusieurs cellules vides. Faute de supprimer certains des renseignements qui pourraient intéresser particulièrement les chercheurs et leur être utiles, on ne peut échapper à de telles difficultés.

La matrice de totalisation commandée à l'origine comprenait 23 520 cellules; ce nombre a été réduit considérablement après de multiples modifications. La matrice finale ne comprenait plus que 6 720 cellules. Dans ce cas, la bande récapitulative coûte \$350, soit un prix probablement inférieur au prix moyen, du fait des dimensions limitées de la matrice résultant de certaines modifications. Compte tenu des besoins propres à la totalisation comprenant une variable professionnelle,

les modifications se justifiaient, mais elles limitaient l'utilité d'ensemble de la bande récapitulative pour toute personne souhaitant étudier les habitudes linguistiques (au foyer) de toutes les catégories d'âge et de sexe des cinq groupes ethniques. Il semblerait qu'ou bien les totalisations devraient comprendre la totalité des catégories variables et ce, pour toutes les variables, ou bien qu'il faudrait réaliser des séries de totalisations parallèles relatives à certaines populations (sur la population active ou la population en âge scolaire par exemple). Les limites de ce type de totalisations amènent à penser que si l'on doit réduire le nombre des variables-clés, l'éducation serait peut-être une meilleure variable que les échelles relatives à l'activité professionnelle dont les applications sont relativement limitées.

- 13 -

On a annulé la commande des six totalisations dont on aurait tiré des microfiches à partir de la bande récapitulative; cette décision vient de ce que le coût estimatif de la réalisation excédait les moyens financiers. Si l'on doit diffuser les totalisations des groupes ethniques sous forme imprimée, il faudra à nouveau étudier la faisabilité des microfiches car on disposerait alors des tableaux sous une forme propice à la reproduction. À l'heure actuelle, il semble cependant que le coût de réalisation des microfiches soit élevé.

Accès à la bande récapitulative à variables multiples.

On a eu recours, pour produire plusieurs variantes de totalisations établies à partir de la bande récapitulative, et pour les raisons précédemment indiquées, au langage de programmation PL/1 dont les qualités de simplicité d'utilisation et de souplesse d'emploi ont pu être encore une fois appréciées. À cet effet, on a retenu le groupe ethnique polonais; on a introduit dans les tableaux les échelles Blishen et la génération à laquelle appartiennent les individus nés à l'étranger, ainsi que la période à laquelle ils ont immigré; les variables relatives à l'âge et à la langue ont permis d'effectuer un contrôle. Dans le second cas, on croisé les échelles Blishen avec la variable de langue et utilisé les variables restantes pour les vérifications. La production des deux tableaux fut relativement économique (environ \$6 pour chacun). Il s'est alors avéré, qu'à défaut de disposer du service complet de programmation de Statistique Canada, un programmeur assez expérimenté est indispensable pour la production de totalisations de ce type à partir de la bande récapitulative d'ordinateur.

Résumé et conclusions

L'importance et la nécessité de disposer d'un fichier de totalisation sur les communautés ethniques et culturelles canadiennes ne font pratiquement plus aucun doute. Le manque

de publications sur les groupes ethniques minoritaires d'immigration récente notamment, constitue un handicap sérieux pour la réalisation de recherches précises. Il est inconcevable que le gouvernement canadien puisse appliquer sa politique de multiculturalisme s'il ne dispose pas de connaissances suffisantes sur les différentes communautés culturelles, et ignore les effets de cette même politique au niveau des communautés ethniques et culturelles de la population canadienne, auxquelles pourtant elle s'adresse.

- 14 - Pour un projet du type qui nous intéresse, le nombre de variables et de catégories qui leur sont associées tel qu'il a été défini dans la proposition initiale constitue à notre avis un minimum. Réduire le nombre des unes ou des autres contribuerait certainement à limiter la valeur et l'utilité d'un fichier de totalisation du type envisagé. Il est absolument essentiel de conserver le plus grand nombre possible des catégories du projet original si l'on veut que le système demeure assez souple pour répondre aux besoins divers, et parfois imprévus, des chercheurs. Une réduction importante du nombre des variables ou de leurs catégories ôterait toute valeur au fichier.

L'utilité de ce dernier dépendra également du nombre des domaines permis par les totalisations. L'inégalité de la répartition des communautés ethniques et culturelles à travers

le Canada rend pratiquement indispensable des totalisations pour chaque province et leurs principales régions. Un fichier de totalisation portant sur les quelque cinquante communautés ethniques et culturelles environ que compte le Canada et qui comporterait uniquement des données d'ensemble pour le pays, empêcherait toute évaluation sérieuse des différentes régionales, bien qu'il autoriserait des études ethniques comparatives à l'échelle nationale.

Ces généralités et le coût du prototype de bandes récapitulatives à variables multiples réalisé aux fins de l'étude de faisabilité, prouvent que le projet n'est pas rentable sous sa forme originale. La modification du fichier de totalisation en vue de le rendre plus économique nécessiterait des changements inacceptables du nombre des variables et de leurs catégories.

#### Autre possibilité

Il reste que le chercheur peut toujours opter pour une seconde solution, solution à laquelle il a déjà été fait allusion à la page 2 de la proposition. Il s'agirait alors pour lui de commander certaines totalisations du recensement spécialement conçues pour les fins précises qu'il recherche. C'est peut-être la meilleure solution pour ceux qui envisagent une étude systématique des données sur les communautés ethniques et culturelles rassemblées dans le cadre du recensement national.

On notera avec intérêt que ces totalisations, en quelque sorte inédites, sur les populations ethniques pourraient, à long terme, et par effet cumulatif, permettre la constitution d'un recueil de données s'il était possible d'être informé de leur réalisation au fur et à mesure que celle-ci est entreprise. À cet égard, il se pourrait que certaines totalisations existent déjà et puissent répondre de façon satisfaisante aux besoins des chercheurs, éliminant ainsi la nécessité de totalisations supplémentaires. Ces renseignements devraient faire l'objet d'une plus large diffusion, en particulier dans les centres universitaires de recherche du Canada.

La solution de rechange se rapproche de la suggestion avancée dans le cadre du projet initial d'un volume imprimé comprenant un nombre limité de totalisations à variables multiples. Cette proposition dépendait de la faisabilité des bandes d'ordinateur récapitulatives à variables multiples dont le prix s'est avéré excessif; on pourrait donc envisager de réaliser des tableaux moins détaillés et moins onéreux sur les communautés ethniques et culturelles, bien qu'il convienne de signaler ici qu'il n'existe actuellement aucune publication sur la plupart d'entre elles.

Il paraît possible de rassembler des données sur les petites communautés ethniques et culturelles en définissant les normes d'une série de totalisations qui complèteraient celles portant sur les principales catégories et auxquelles Statistique Canada a consacré une publication dans le cadre du recensement de

1971. Les statisticiens du gouvernement ont notamment dressé des tableaux assez complets qui fournissent de nombreux renseignements de nature sociale et économique sur les principaux groupes à l'échelle du Canada, de ses provinces et des zones métropolitaines de recensement. C'est ainsi qu'on dispose actuellement de publications sur les communautés d'origine britannique, française, allemande, italienne, juive, hollandaise, polonaise et ukrainienne. Pour ce qui est des 42 catégories restantes, les publications regroupent deux ou plusieurs communautés ethniques: c'est le cas des Scandinaves, des Indiens et des Esquimaux, des Chinois et des Japonais, et des Asiatiques; dans d'autres cas, on s'est contenté de les amalgamer dans des catégories résiduelles comme "Européen - divers", "Asiatiques - divers" ou simplement "Divers". On donc rassemblé des informations sur 51 catégories ethniques différentes que l'on a enregistrées sur des bandes magnétiques d'ordinateur; on ne dispose cependant de renseignements que pour 8 catégories distinctes et pour un certain nombre de catégories regroupées; par contre on ne possède aucune donnée sur les nombreuses catégories restantes prises individuellement.

Bien que les données actuelles sur les huit principales catégories ethniques ne soient pas très complètes, leur utilité serait pourtant considérablement accrue si l'on disposait de totalisations identiques pour les autres catégories, sous réserve qu'elles portent sur des groupes distincts

et sur les mêmes régions. Il en résulterait des économies considérables pour les dépenses qu'impliquerait la proposition initiale car le nombre des catégories serait relativement limité tout comme celui des matrices de totalisation. On remarquera que l'effectif total de ces groupes ne dépasse guère un million et demi de personnes.

|                      |                |
|----------------------|----------------|
| Scandinaves          | 384 795        |
| Européens - Divers   | 772 480        |
| Asiatiques           | 285 540        |
| Indiens et esquimaux | 312 765        |
| Divers et inconnus   | <u>293 580</u> |
| Total                | 1 664 365      |

Cette méthode présenterait deux avantages. En premier lieu, elle fournirait des données démographiques fondamentales sur chacune des communautés ethniques, ce qui n'est pas le cas actuellement, et, en second lieu, elle permettrait d'avoir ces renseignements sous une forme semblable à celle des données, qui par ailleurs ont été largement diffusées, recueillies sur les principaux groupes à l'occasion du recensement de 1971.

17 - Cela ne comblerait pas pour autant les sérieuses lacunes qui caractérisent l'information socio-économique sur les populations ethniques du Canada. Cette solution permettrait néanmoins d'obtenir des renseignements fondamentaux inexistants à l'heure actuelle et, par conséquent, autoriserait le lancement d'études comparatives portant sur les caractéristiques essentielles de la plupart des catégories ethniques du Canada.

Les deux premiers volumes du recensement du Canada de 1971 comportent une quarantaine de totalisations qui présentent les renseignements démographiques fondamentaux des principales catégories ethniques du Canada, leur répartition dans les zones rurales et urbaines, à l'intérieur des provinces et dans les zones métropolitaines de recensement. Les volumes traitant des caractéristiques économiques ne fournissent que deux totalisations sur la répartition sectorielle des groupes ethniques et deux totalisations sur les caractéristiques professionnelles. Le nombre de ces totalisations est donc assez réduit; on pourrait réaliser des totalisations supplémentaires dans l'ordre retenu pour les publications du recensement et dans leur totalité, si l'on disposait de fonds suffisants, ou au fur et à mesure que des crédits seraient débloqués. Compte tenu du manque total de données statistiques sur la plupart des groupes minoritaires, la publication d'un seul tableau constituerait un apport important à la connaissance des minorités à la connaissance des minorités ethniques du Canada.

L'objectif, dans une initiative de ce genre, serait la publication de tableaux supplémentaires sur les minorités ethniques dans un format identique à celui utilisé pour le recensement de 1971, sans qu'il soit nécessaire de faire des dépenses additionnelles pour couvrir les frais d'impression et de diffusion. On n'a entrepris aucune démarche auprès de Statistique Canada pour connaître le coût estimatif de la réalisation de ces

totalisations supplémentaires, mais il convient de noter que la taille moyenne des matrices y serait nettement inférieure à celle des matrices de totalisation du projet initial et que le chiffre de population considéré serait inférieur de 10 % à celui visé par la proposition initiale. A supposer même que le coût estimatif moyen de chaque totalisation soit aussi élevé que dans le cas de la proposition initiale, à savoir \$400, le coût total de la réalisation des totalisations supplémentaires avoisinerait \$17 000. Certes, ces dernières présenteraient beaucoup moins d'intérêt que les totalisations à variables multiples que l'on se proposait de mettre sur bandes d'ordinateur, mais elles ne répondraient pas moins à un besoin crucial des chercheurs appelés à étudier les minorités ethniques du Canada, sans compter qu'elles contribueraient à accroître le volume de données déjà publiées sur les principales communautés ethniques et culturelles du pays.

## ANNEXES

- A. Liste des variables du projet de fichier sur les groupes ethniques.
- B. Commande datée du 19 août 1977 adressée à Statistique Canada pour la réalisation d'une totalisation spéciale avec description de la variable à utiliser; lettre de confirmation en date du 27 novembre 1977 traitant des modifications souhaitées par le service de diffusion des données de Statistique Canada.

Liste imprimée réalisée à partir d'une bande informatique récapitulative de totalisation, du recensement de 1971; cette liste énumère certaines caractéristiques de cinq groupes ethniques canadiens.

Liste imprimée établie d'après la bande de totalisation récapitulative du recensement de 1971, indiquant, à l'intérieur des grandes régions, la répartition des communautés ethniques dans les zones rurales et urbaines, en fonction de la génération à laquelle appartiennent les personnes recensées et de la période au cours de laquelle elles ont émigré.

ANNEXE\*

LES VARIABLES ET LEURS CATÉGORIES

Nous tenons à souligner que les catégories de chaque variable sont données à titre indicatif. Ces catégories ne seront établies de manière définitive qu'après avoir réalisé suffisamment d'essais au cours de la phase préliminaire. Deux principes ont été retenus. Aux termes du premier, on utilise autant de catégories que les questions du questionnaire et le système de codification le permettent; en vertu du second, on supprime les catégories qui risqueraient de donner naissance à un nombre excessif de cellules vides ou dont la moyenne serait de cinq éléments. Il reste à définir les lignes directrices qui commanderont les choix.

1. Données ethniques

- le plus grand nombre possible de catégories
- si nécessaire, et en fonction de la taille des groupes considérés dans les unités (province, ville, par exemple), compression des catégories.

---

\*Source: Annexe du Proposal for A Tabular Census Data File on Ethnic Groups in Canada, présenté en janvier 1976 par Raymond Breton, ..., à la Direction du multiculturalisme du Secrétariat d'Etat, Ottawa.

2. Age

- 0 à 14 ans
- 15 à 24 ans
- 25 à 34 ans
- 35 à 44 ans
- 45 à 65 ans
- 65 ans et au-delà

3. Profession

Echelle Blishen (six catégories)

4. Secteurs industriels

- agriculture
- exploitation forestière, pêche, chasse des animaux  
à fourrure, exploitation minière
- fabrication et transformation
- construction
- transports, communications et autres services publics
- commerce
- finances, assurances et immobilier
- administration publique et défense
- éducation et services connexes
- santé et services sociaux
- organisations religieuses
- services
- divers

5. Sexe

- masculin
- féminin

6. Etudes

- pré-élémentaires et élémentaires
- secondaires partielles
- secondaires complètes
- postsecondaire ou universitaires partielles
- universitaires complètes

7. Etudes primaires et secondaires (niveau le plus élevé)

- au Canada
- à l'étranger
- aucune scolarisation

8. Exogamie

- épouse de la même origine ethnique
- épouse d'une origine ethnique différente:
  - britannique
  - française
  - allemande
  - italienne
  - hollandaise
  - juive
  - polonaise

scandinave  
ukrainienne  
asiatique  
indienne  
est-européenne - divers  
ouest-européenne - divers  
divers  
- non marié

9. Situation matrimoniale

- célibataire
- marié (séparé y compris)
- divorcé
- veuf

10. Taille de la famille par catégories

- 2 ou 3
- 4 ou 5
- 6 et plus

11. Famille - taille moyenne

12. Religion

- Eglise anglicane
- Eglise luthérienne
- United Church
- Catholique romaine
- Catholique ukrainienne
- Orthodoxe
- Protestante - divers
- Mennonite
- Hutterite
- Juive
- Doukhobor
- Divers
- Agnostique

13. Langues officielles

- anglais uniquement
- français uniquement
- les deux
- aucune des deux

14. Langue maternelle

- langue ancestrale
- anglais
- français
- autres

15. Pratiques linguistiques

- Langue ancestrale parlée au foyer comme à l'extérieur
- langue ancestrale parlée au foyer et connaissance d'une autre langue
- connaissance de la langue ancestrale et autre langue pratiquée au foyer
- autre langue pratiquée au foyer comme à l'extérieur

16. Génération

- né de parents autochtones
- né de parents d'origine différente et étrangers
- né à l'étranger: avant 1941
- né à l'étranger: entre 1941 et 1945
- né à l'étranger: entre 1946 et 1950
- né à l'étranger: entre 1951 et 1960
- né à l'étranger: entre 1961 et 1970

17. Foyer: nombre de familles

- aucune
- 1
- 2 et plus

18. Foyer: nombre de personnes

- 1
- 2 ou 3
- 4 ou 5
- 6 à 9
- 10 et plus

19. Domicile: locataires

- locataire(s)
- aucun: propriétaire  
locataire

20. Nombre moyen de personnes par foyer21. Logement

- habité par le propriétaire
- habité par un locataire

22. Logement occupé depuis

- moins d'un an
- 1 à 2 ans
- 3 à 5 ans
- 6 à 10 ans
- 10 ans ou plus

23. Hypothèques: origine

- institutions financières
- gouvernement (instance quelconque)
- particuliers
- autres
- aucune hypothèque

24. Situation et catégories professionnelles

- salarié ou employé rémunéré
  - (travaillait la semaine dernière)
  - (licenciement provisoire)
  - (actif, mais ne travaillant pas)
- établi à son compte
  - (travaillait la semaine dernière)
  - (temporairement inactif)
  - (actif, mais ne travaillant pas)
- travail non rémunéré pour la famille
- à la recherche d'un emploi
- n'appartient pas à la population active

25. Revenu

- moins de \$1000
- \$1000 à \$1999
- \$2000 à \$4999
- \$5000 à \$9999
- \$10000 à \$14999
- \$15000 à \$24999
- \$25000 et plus

Le 19 août 1977

Monsieur Alex Berljawsky  
Secteur du recensement, Statistique Canada  
Ottawa (Ontario)

Monsieur,

Dans le cadre de la réalisation d'un fichier de totalisations constitué à partir des données du recensement, projet qui est entrepris sous les auspices de la Société canadienne d'études ethniques, je souhaiterais passer commande à votre ministère de: A) une totalisation sur bande récapitulative et B) six totalisations sur microfiches.

A) La totalisation sur bande récapitulative et portant sur l'ensemble du Canada, ainsi que les caractéristiques de la variable se définissent de la manière suivante:

Totalisation:

Origine ethnique en liaison avec la profession, le sexe, l'âge, la période au cours de laquelle les sujets ont émigré, ainsi que la génération à laquelle ils appartiennent, et la langue pratiquée au foyer.

Caractéristiques de la variable:

1) Origine ethnique:

grecque  
portugaise  
hongroise  
polonaise  
chinoise

Note: Aucun total

2) Profession: On retiendra les catégories suivantes de l'échelle Blishen:

0 à 29 ans  
30 à 39 ans  
40 à 49 ans  
50 à 59 ans  
60 à 69 ans  
70 ans et plus  
Total

Le 27 novembre 1977

Monsieur Alex Berljawsky  
Secteur du recensement, Statistiques Canada  
Ottawa (Ontario)

Monsieur,

La présente fait suite à notre conversation téléphonique du 24 novembre dernier. Elle confirme la demande écrite que la Société canadienne d'études ethniques vous avait adressée le 19 août 1977 visant cinq (5) modifications à apporter à une totalisation sur bande récapitulative.

La société canadienne d'études ethniques a accepté les cinq modifications suivantes:

- 1) la suppression du critère de sexe
- 2) la suppression de la catégorie d'âge allant de 0 à 14 ans
- 3) l'addition à la commande de la liste imprimée de la totalisation
- 4) la limitation au sexe masculin de la totalisation
- 5) l'enregistrement sur bande récapitulative de la totalisation et son impression en deux parties qui se définissent de la manière suivante:
  - a) les scores Blishen d'activité professionnelle inférieurs ou égaux à cinquante (50)
  - b) les scores Blishen d'activité professionnelle supérieurs à cinquante (50)

Recevez, Monsieur, l'expression de mes sentiments les meilleurs.

Albert W. Currie  
Chercheur assistant  
Société canadienne d'études  
ethniques

Warren E. Kalbach  
Professeur de sociologie  
Université de Toronto

- 3) Sexe: masculin  
féminin  
total
- 4) Âge: jusqu'à 14 ans  
15 à 24 ans  
25 à 34 ans  
35 à 44 ans  
45 à 64 ans  
65 ans et plus  
total
- 5) Période d'immigration et génération:
- né au Canada de parents autochtones  
né au Canada de parents nés à l'étranger  
né à l'étranger: immigré avant 1931  
né à l'étranger: immigré entre 1931 et 1945  
né à l'étranger: immigré entre 1946 et 1950  
né à l'étranger: immigré entre 1951 et 1960  
né à l'étranger: immigré entre 1961 et 1971  
Total
- 6) Langue pratiquée au foyer:
- parle sa langue ancestrale à la maison  
parle l'anglais à la maison  
parle le français à la maison  
total

B) On trouvera ci-dessous une liste des six totalisations demandées sur microfiches. a) Les caractéristiques de la variable et la zone géographique concernée sont identiques à celles de la bande récapitulative. Le champ des données de la fiche devra pouvoir être réduit 48 fois. Nous désirons une fiche positionnelle.

- 1) Origine ethnique en liaison avec la profession, la période d'immigration et la génération
- 2) Origine ethnique en liaison avec l'âge, la période d'immigration et la génération
- 3) Origine ethnique en fonction du sexe et de la profession
- 4) Origine ethnique en fonction de l'âge et de la langue utilisée au foyer
- 5) Origine ethnique en fonction de la période d'immigration, la génération et la langue utilisée au foyer

6) Origine ethnique en liaison avec la profession et la langue utilisée au foyer

Lors de notre dernière conversation téléphonique, nous avons convenu de reprendre contact dans les deux semaines qui suivraient afin que vous nous donniez un premier devis et que nous discussions des problèmes que vous souhaiteriez aborder. Tant que l'on ne sera pas fixé sur le prix des microfiches, aucune décision ne pourra être prise quant à leur utilisation pour l'emmagasinement des données.

Au cas où vous seriez confronté à des problèmes requérant une solution immédiate, et ne seriez pas en mesure de me joindre par téléphone, veuillez vous adresser à M. Warren E. Kalbach, Erindale College, University of Toronto (416) 828-5315.

Le contrat portant sur la bande récapitulative et les microfiches devra être adressé à la Société canadienne d'études ethniques à l'adresse suivante:

M. Norbert Hartman  
Société canadienne d'études ethniques  
43 Reaburn Avenue  
Dowdview (Ontario)

Veuillez agréer, Monsieur, l'expression de mes sentiments les meilleurs.

Albert W. Currie  
Chercheur assistant  
Société canadienne d'études ethniques

GLOSSARY OF TERMS/DICTIONNAIRE

| English   |   | Français  |   |
|---|---|---|---|
| Term Used   | Explanation   | Terme   | Explication   |
| 1. Experienced labor force  | The total labor force excluding those looking for work who had never worked, or who had worked only prior to Jan. 1, 1970.  | Population active expérimentée  | La population active moins les personnes cherchant du travail qui n'ont jamais travaillé ou qui ont travaillé seulement avant le 1er janvier 1970.  |
| 2. Ethnic Origin  | Refers to one's ethnic or cultural background traced through the father's side.   | Origines ethniques  | Antécédents ethniques ou culturels du côté paternel.  |
| 3. <u>Blishen Occupational Prestige</u><br><u>OCC. Prestige</u><br><u>Index &lt; 30 Occ. Prestige</u> | Attribution of a prestige index to each occupation unit group used by the Census. This was extrapolated from the proportion of males in each occupation who had attended at least the fourth year of secondary school and the proportion with an employment income in 1970 of \$6,500 or more. The basis of this extrapolation is the relationship observed among the above two factors and the subjective prestige ranking given a sample of occupations in an opinion survey. Values range from about 14 (low) to about 75 (high). For more information see B.R. Blishen & H.A. McRoberts, "A revised socio-economic index for occupations in Canada", Canadian Review of Sociology and Anthropology, 13(1) 1976. | <u>L'indicateur de prestige professionnel Blishen</u><br><u>Prestige Prof.</u><br><u>Index &lt; 30 Prestige Prof.</u> | L'imputation d'un index de prestige à chaque classe de profession utilisée au recensement. Ce fut extrapolé à partir de la proportion masculine de chaque profession ayant fréquenté au moins la quatrième année d'études secondaires, et la proportion ayant un revenu d'emploi en 1970 de \$6,500 ou plus. La base de cette extrapolation est le rapport observé entre ces deux facteurs et le rangement subjectif de prestige d'un échantillon de professions obtenu lors d'un sondage d'opinion publique. L'index s'échelonne d'environ 14 (bas) à 75 (haut). Pour de plus amples renseignements voir B.R. Blishen & H.A. McRoberts, "A revised socio-economic index for occupations in Canada", Revue canadienne de sociologie et d'anthropologie, 13(1) 1976. |
